Subject: EPA Cleanup Action - Leonard, TX

Hello Darrell,

I wanted to make contact with you as the EPA is performing a cleanup action in Leonard, TX at the former F.J. Doyle Salvage Site at 905 N. Poplar. The site was the former location of transformer dismantling facility that operated from about 1976 to 1999. The EPA conducted a removal site evaluation in the Spring to determine the extent of contamination based upon historical sampling that occurred in 1990 through 1998. The EPA determined that a cleanup was necessary and we mobilized in November 2018. We are addressing the industrial property, 3 residential properties, alleyway, and drainage ditches near the industrial property. The primary contaminant of concern is PCBs with secondary contaminants including various semi-volatiles and metals. The site is adjacent to the school complex and a school daycare. To date, we have demolished the onsite building, excavated 31 of the 53 grids planned for excavation which has generated 1756 tons of PCB contaminated soils as well as 30 cyd of wood from the building and 30 cyd of sheet metal that was recycled.

If you have any questions, please do not hesitate to contact me. It was mentioned by Steve Mason that we should probably talk at some point and if possible try to arrange a discussion about concern you may have in Fannin County. If you get a chance, please give me a call.

Thanks

Gary W. Moore (6SF-ER)
